

## A. Comments:

**Technical assistance** – Many THANKS to **FRED CUPP** ( <http://DelawareAndHudson.net> ) of Williamsport, Pa, for technical assistance and EDUCATING–ME, how to use DCC, and how to use the Mini Panel

The following Pages 2 thru 5 show the commands used in the NCE Mini Panel for the video “AutoControls #804: Demo of NCE DCC Mini Panel for Auto. Train Control”.

Note that this word processing document is just DOCUMENTATION for my own REFERENCE, so I can remember what instructions are entered in which location . I had to enter all these commands into the Mini Panel, line–by–line, using the NCE ProCab throttle.

A person with a photographic memory could SKIP this whole documentation part of the process. I’m not claiming these programming sequences are either good or efficient; it’s just how I BLUNDERED my way through the project.

## The Normal Operating Sequence

For the last iteration of this display (modified slightly after the video was recorded), I used “button 9” (the pushbutton connected to Input 9). This caused the Mini Panel to start executing the instructions in memory location for Input 9.

Startup: Input 9 – Turn on lights and rooftop strobe light on stationary HO D&H diesel, then link to Input 14.

S Gauge: Inputs 14–20 (page 3) – Operate the S gauge train (small loop with electric eye to position stopping train in front of station).

LargeScale: Inputs 21–26 (page 4) – Operate the LargeScale train (point–to–point with reed switches at each end of the track).

N gauge: Inputs 27–30 (page 5) – Operate the N gauge train (small loop, simple sequence, just start up, run, and slow down; no sensors in track).

At this point, I was out of instruction space (you don’t want to use Input 31 unless you want the Mini Panel to start executing automatically, which I did not), so I “Linked to” Input 8 which had available space, and entered an additional 3 instructions to turn off the sound on the MRC sound decoder used for the N gauge.

# Commands for Video #804, NCE Mini Panel Demo–v31b, 12/14/2010

## About The Sequences:

**Continuous Memory** – Starting at Input 14, memory is set to “continuous”. Below Input 14, the code in each input only executes the 4 steps for that input, unless the 4<sup>th</sup> step is a “Link” statement. This is explained BETTER in the NCE Technical Reference manual on Page 3.

**Spagetti Code** – This looks somewhat like what programmers would disdainfully call “spagetti code” if it were in a computer program. I “jumped around” with the code somewhat, to fit it in the available memory locations.

If this was in code in a computer program, I would have used the Editor to “clean it up”. But since you have to re-enter each line of instruction to move it to another location, I just “improvised” as best as possible.

## Special Stopping Sequence

Although I didn’t normally use this sequence, if I wanted to stop the trains and shut off their sound units without turning off the whole command station, I could use the RESET button (connected to the Mini Panel’s “reset” terminals) to cause it to stop executing instructions, then use Pushbutton 4 to initiate the “all stop” sequence in Input 4 through 7.

Note that execution would stop at Input 7 Step 4, since there is no “Link” instruction, and “continuous memory” is not set below Input 14.

## B. The Instructions:

The instructions programmed into the Mini Panel are shown on the following Pages 3 thru 6 .

# Commands for Video #804, NCE Mini Panel Demo-v31b, 12/14/2010

Changes: v30: add C628 HO, v29: Link S to N, to run without G, combine stop sequences.

(use cont. memory, starting input 14) (set mem loc 3 = 14) To generate "end", use Selection 7 "Terminate" under "5 other" Cv3=acc=30, Cv4=dec=30 (1/8" drill bit for eye)	S ga used inp 11, G ga uses inp's 12+13 Eng. 228=FEC, 302=Atlantic, 305=Frisc0, 452=EL 16=D&H N ga, 760= SF G ga.
---	---

		Command	Action	Summary
-	-	<b>N strt</b>		
1	1	Link to Input: 27	jump to Loco 16, D&H N ga. PA	<b>N strt</b>
1	2	nop		
1	3	nop

19	4	Speed Fwd: 0	STOP speed 00	
-				
20	1	Delay 4 sec: 004 (6)	stop at end for 24 sec	coast to STOP
20	2	nop		
20	3	F5-F8: ---8	F6=strobe OFF, F8 also (sb F5-F8: -6-8)	turn sound off
20	4	nop		
			(21 thru 26 is g scale commands)	<b>Continue to LargeScale</b>

## S gauge

Button 3 start, \_\_ stop

let sound settle  
bell

**←--Reverse**

delay bell -> horn

horn

wait

coast to STOP  
bell

**Forward →**

delay bell -> horn  
horn

wait

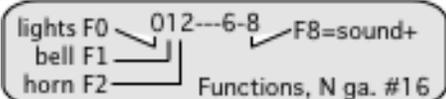

coast to STOP

turn sound off

**Continue to LargeScale**

# Commands for Video #804, NCE Mini Panel Demo-v31b, 12/14/2010

			
27	1	~~~~~> Select Loco: 16	Select Loco: 16, N ga. D&H PA
27	2	F5-F8: --8	F8=sound ON)

27	4	F0-F4: 01---	headlights on, bell ON
-	-		
28	1	Speed Fwd: 12	Forward - - →
28	2	Delay 4 sec: 2	delay 8 second to ring bell
28	3	F0-F4: 0----	headlights on, bell OFF
28	4	Delay 4 sec: 8	delay ____ second between bell & horn
-	-		
29	1	F0-F4: 0-2--	headlights on, horn ON
29	2	Delay 4 sec: 001	delay 4 second (blow HORN 4 sec)
29	3	F0-F4: 0----	headlights on, horn OFF (F0 lights, F2 horn)
29	4	Speed Fwd: 0	STOP speed 00
-	-		
30	1	Delay 4 sec: 6	delay ____ second to get stopped
30	2	Link to Input: 8	go to input 8, to turn off sound
30	3	nop	
30	4	nop	

**3 N gauge**

let sound settle  
bell

Forward →

delay bell -> horn

horn

coast to STOP

**Go To more N gauge**

## Notes 1

Summary: This "sequence" is being written to control an S-gauge, Sountraxx-equipped diesel in forward and reverse directions on a point-to-point layout.  
Technical assistance courtesy of FRED CUPP

Note Eng. #452: F5-F8: -6—turns strobe & sound on; F5-F8: ---8 turns strobe & sound off
